OUR VISION AND MISSION

WHEN ONLY THE BEST IS GOOD ENOUGH

At STING our vision is - and always has been - to be the very best at what we do.

The pursuit for perfection is what drives us.

Since the beginning, the STING brand has been synonymous with outstanding quality, innovative design and superior style.

From our first range of boxing gloves, STING developed a reputation as a brand whose products consistently delivered the very best feel, fit and performance.

Our focus on quality is what sets us apart from our competitors and, as we expand our range to encompass a wider range of sports and fitness activities, our desire to continually deliver exceptional products shapes everything we do.

Every item in the STING range has been designed to withstand the rigours of high-performance training and competition. We use only the finest and most innovative technical materials, and we manufacture to the highest specifications, each and every time.

Our mission is to unleash the ultimate performance in every athlete, from amateur to elite.

Whether you're an elite competitor, or you train purely for fitness and fun, STING promises to deliver power for your passion.

OUR MANUFACTURING

WORLD CLASS CRAFTSMANSHIP, UNQUESTIONABLE QUALITY

"I fight for perfection." - 'Iron' Mike Tyson.

As one of the world's fasting growing fitness brands, we supply hundreds of thousands of products to athletes around the world. As our business continues to grow and evolve, one thing that remains constant at STING is our unwavering commitment to quality craftsmanship.

All STING products are manufactured in-house to ensure that design concepts are executed perfectly, and that every product carrying the STING logo meets our strict quality selection criteria.

As well as striving to meet the uppermost standards of quality, STING also aims to maintain the highest social and ethical standards. Use STING products with confidence, knowing that each and every product has been made by skilled craftsman who share the STING commitment to excellence.

TECHNOLOGY

NEO GEL: New Gel technology increases absorption and dissipation of impact energy. Reduces referred shock, user fatigue and potential injuries.

GEL FUSION: Integrated Gel materials fused in place during a controlled lamination or injection process to ensure even dissipation of impact energy.

SLV3: Soft and supple like natural leather, with a full leather grain finish. High performance structure without the porous qualities of natural leather. Reduces odour and performs better for longer.

THERMALITE THREE (T3): Strong, lightweight material, designed with a multi-directional outer layer for reduced heat absorption and increased moisture evaporation.

ATMOSPHERE: New integrated airflow technology combining three-dimensional, moisture dissipating materials and air circulatory channels to help conduct heat and moisture away from the body.

AMARA: Japanese synthetic suede material made from bundles of super fine fibres locked together with polyurethane resin. Amara offers the same composition, look and feel as natural leather, but with better durability and air permeability.

LEATHER PREMIUM: Carefully selected leather hides chosen for their suppleness and treated under special tanning processes to meet strict STING quality standards. Designed to last longer and outperform standard leathers.

HI FLOW CORE: Injection moulding system produces a singlvvve weighted mould under heat, allowing for accurate weight distribution, increased impact absorption and maximum protection. Ideal for sparring, high performance training and competition.

HD CUP: Promotes correct hand positioning to absorb shock and reduce jarring on elbows and shoulders.

DUAL CORE: Carefully selected materials bonded under lamination to promote maximum energy absorption. Increases longevity of the inner core while maintaining required weight characteristics.

QUAD CORE: 4 ply material lamination process fuses the core properties of each material to produce a singular structure. As energy is transferred on impact, each layer acts to cancel, absorb or dissipate energy waves to reduce user fatigue and minimise injury.

KEVLAR: Light weight, high strength material that is resistant to corrosion and abrasion. Kevlar helps minimise vibration and can withstand high levels of distortion without breaking.

COMFORTLINE: Patented 3D floating glove liner technology, designed to increase hand comfort through a unique cushioning and moisture management system, and finished in an ultra-soft top layer.

SPORTLINE: Utilises our patented 3D floating glove liner technology, with an added moisture protection barrier to increase durability and protect against wear and tear. Finished with an Atmosphere top layer for improved airflow and moisture management.

SPORTLINE PLUS: All the benefits of Sportline, with an extra moisture protection barrier to guard the glove inner core against moisture damage. Finished in high performance memory material that expands and contracts with your hand as you train.

SAS/SAS PLUS: (SHOCK ABSORBANCE SYSTEM) Our SAS Shock Absorbance System incorporates an integrated strike energy management layer to help dissipate impact energy and reduce impact fatigue. SAS Plus offers increased density and absorption for improved performance.

ANILINE LEATHER: Top grain leather with a special pigment treatment to ensure colour consistency, fade resistance and durability, and a clear water-based topcoat for additional protection.

MICROSUEDE: Knitted fabric created from fibres over a hundred times finer than human hair. These delicate fibres are tightly woven to create a dense fabric that has the look of suede leather, yet outperforms by being stronger, softer and easier to clean.

GRIP FLEX: Finger expansion joint, designed to safely absorb glove flex and strengthen glove components under load as the hand expands and contracts during training.

EASY WASH: Specially treated, washable leather which can be air-dried to maintain suppleness and repel moisture.

COOL WEAVE: A 4-way woven material with airflow and moisture management properties for maximum comfort. Expands and contracts with your hand during training to maintain ideal fit and glove stability.

DIAMOND COOL WEAVE: All the benefits of Cool Weave, with a 3D hook and rod construction . Available in HD and Lite versions.

BOXING

WHETHER YOU FIGHT TO COMPETE, OR JUST FOR FITNESS AND FUN, STING HAS THE PERFECT COMBINATION OF BOXING GEAR TO HELP YOU REACH AND EXCEED YOUR GOALS.

VIPER

A professional sparring glove prepared for the ring and made to win. Strike with venom and ensure maximum impact with the viper sparring glove.

UPPERCUT WALL BRACKET

COLOUR OPTIONS

- Angled uppercut design
- Single piece, high density foam
- Steel wall mount bracket for easy installation

SIZE OPTIONS: STANDARD

PROFESSIONAL LEATHER FLOOR TO CEILLING BALL

COLOUR OPTIONS

- Select A grade leather specially designed and treated to produce maximum longevity while maintaining elasticity
- Heavy duty elasticised cable design ensures even movement and return
- Adjustable belt and buckle system for easy installation and tension adjustment

SIZE OPTIONS: 10INCH

PROFESSIONAL LEATHER SPEED BALL

COLOUR OPTIONS

- Select A grade leather treated to last longer and maintain elasticity
- Unique slim line design for high speed and straight line consistency
- Heavy duty strop and stitching for increased durability
- Hand cut and stitched by master craftsmen
- Available as a kit with professional speedball swivel

SIZE OPTIONS: 10INCH

REPLACEMENT FLOOR TO CEILING BALL STRAPS

- Replacement straps, elasticised cord and cable locks

SIZE OPTIONS: STANDARD

SPEEDBALL WALL BRACKET

- Facilitates smooth, fast speedball movement
- Heavy duty mounting board with curved edge
- Use with competition speedball swivel
- Easy to install

SIZE OPTIONS: STANDARD

HD PUNCH BAG WALL BRACKET

- Use with mounting accessories to mount punch bag or floor-to-ceiling ball
- Heavy duty steel construction
- Replaceable hook

SIZE OPTIONS: STANDARD

BAG/FC WEIGHT DISC HOOK

- Uses your existing weight discs
- Portable and easy to install
- Use for punch bag or floor-to-ceiling ball tie down

BOWED SHACKLE AND SWIVEL

- Use for mounting punch bag
- Increases lifespan of D shackle and belt by reducing wear

HD PUNCH BAG BEAM HOOK

- Heavy duty mounting bracket for beam installation
- Reduces bag vibration
- Dual closed bearing swivel for smooth operation

SNAP HOOK AND SWIVAL

- Use for mounting punch bags to bag mount
- Reduces stress on straps and D shackle

SPEEDBALL SWIVEL

- Use with STING professional speedball
- Light weight and designed to withstand high impacts
- Smooth action to assist straight line movement
- Non-abrasive U shackle for speedball longevity

BAG/FC FIXED FLOOR HOOK

- Easy fixed floor installation
- Heavy duty construction
- Usable for punch bag or floor to ceiling ball tie down

INSTALLATION CHAIN AND SWIVEL

- Use for mounting punch bags to bag mount
- Allows for easy adjustment of bag fixing height
- Reduces stress on straps and D shackle

ACCESSORIES

"Protect yourself at all times… Once you touch gloves, it's fight time. It's open season." – Floyd Mayweather

The human hand is a mechanical marvel containing more than 274 parts, including bones, joints, ligaments, muscles and nerves, which work in unison to punch, grapple, lift and push.
